

New SaniDate® Ready to Use Fruit and Vegetable Wash

BioSafe Systems is excited to introduce a new product to the retail marketplace, SaniDate® Ready to Use Fruit & Vegetable Wash. SaniDate Fruit & Vegetable Wash eliminates 99.9% of bacteria on contact, including E. coli and Salmonella, to prevent the spread of disease and to keep produce fresh for longer.

The activated peroxygen chemistry is a green alternative to harsh chemical treatments, and does not leave any residue behind. It works on contact to oxidize plant and human health pathogens, providing an extra step in the food safety process. SaniDate Fruit & Vegetable Wash is ideal for use in restaurants, food processing facilities, grocery stores, and around the home to help clean and sanitize fruit and vegetable surfaces.

SaniDate Fruit & Vegetable Wash is available in 32 fl. oz. spray bottle containers. For more information, including questions about ordering, please contact BioSafe Systems at toll-free 1-888-273-3088.

About BioSafe Systems, LLC – The BioSecurity Company

BioSafe Systems, LLC is the manufacturer of disease control solutions such as ZeroTol Broad Spectrum Algaecide/Fungicide, OxiDate Broad Spectrum Bactericide/Fungicide and GreenClean Granular Algaecide. With a presence in the agriculture, animal health, post harvest, horticulture, turf, retail, and aquatics industries, BioSafe Systems will continue growing with the release of new products and solutions to meet the disease-control needs of homeowners and professionals alike.
