

New look for SaniDate® Ready to Use Hard Surface Sanitizer

BioSafe Systems is excited to unveil a new look for SaniDate® Ready to Use Hard Surface Sanitizer. Newly introduced last year, SaniDate RTU is an EPA Registered sanitizer effective against 99.9% of bacteria, including E. coli, Staphylococcus, and Salmonella. The new bottle design is part of BioSafe Systems' expanding retail line that includes new products for 2011.

SaniDate RTU can be used on any hard, non-porous surface, including food contact surfaces. A chlorine alternative, SaniDate RTU uses activated peroxygen chemistry to eliminate bacteria on contact without leaving chemical residues. No dilutions are necessary, and there are no off-gassing or strong odor concerns. SaniDate RTU provides a "green" alternative to chlorine, quat, and phenol cleaning compounds.

BioSafe Systems' retail product line includes algae control for ponds, disease control for gardens and lawns, hard surface algae control, and home sanitation products. Many of these products are new for 2011. For information about SaniDate RTU or these new retail products, contact BioSafe Systems at toll-free 1-888-273-3088.

About BioSafe Systems, LLC – The BioSecurity Company

BioSafe Systems, LLC is the manufacturer of disease control solutions such as ZeroTol Broad Spectrum Algaecide/Fungicide, OxiDate Broad Spectrum Bactericide/Fungicide and GreenClean Granular Algaecide. With a presence in the agriculture, animal health, post harvest, horticulture, turf, retail, and aquatics industries, BioSafe Systems will continue growing with the release of new products and solutions to meet the disease-control needs of homeowners and professionals alike.
